Australian origin trypsin is highly sought after, due to Australia’s freedom from all major epidemic diseases of livestock, including Foot and Mouth Disease.

This status is collectively administered by The World Organization for Animal Health (OIE), the Food and Agriculture Organization of the United Nations (FAO) and the World Health Organization (WHO), who are responsible for monitoring the international epidemiology of livestock diseases.

Bovogen Biologics’ Trypsin is manufactured in Australia under strict GMP conditions, which ensures that it meets the highest quality standards. In line with this quality, the origin of all raw materials is fully documented in the company’s robust Quality Assurance system.
Further differentiating the quality of Bovogen Biologicals’ Trypsin, there are no bovine derived products used in any aspect of the manufacturing process. This practice serves to minimize TSE risk.

As the only Australian manufacturer and supplier of Australian origin purified trypsin, Bovogen Biologicals’ mission is to guarantee that the quality of our products will meet and exceed our specifications each and every time.
